

E-Invoicing Advisory & Compliance Services

Digital Tax Transformation | UAE and Global

Electronic invoicing (E-invoicing) is rapidly becoming a regulatory standard across jurisdictions worldwide. Governments are implementing structured e-invoicing frameworks to enhance tax transparency, reduce VAT gaps, and improve audit efficiency. Countries such as India, Saudi Arabia, Malaysia and members of the European Union have already adopted mandatory e-invoicing regimes, each with unique technical and legal requirements.

The United Arab Emirates is also preparing to implement a phased e-invoicing mandate, expected to become effective by July 2026. This initiative will require businesses to issue structured electronic invoices, transmit them to the Federal Tax Authority (FTA) via Accredited Service Providers (ASPs), while ensuring adherence to the UAE's e-invoicing framework and VAT regulations.

At Andersen, we are at the forefront of this transformation. We combine deep tax expertise with advanced technology capabilities to help businesses globally to prepare for and implement e-invoicing frameworks that are compliant, efficient, and scalable.

Why Andersen

Tax and Technology Expertise

Deep knowledge of VAT, excise, customs, corporate tax, and regulatory compliance, combined with strong capabilities in ERP integration and digital enablement.

Cross Jurisdictional Delivery Capability

Proven experience of delivering e-invoicing services across diverse regulatory environments, including Saudi Arabia, India, Malaysia, and Spain, with deep understanding of Peppol standards and local compliance requirements.

AI-Enabled Compliance

Use of AI to enhance data validation, anomaly detection, and real-time regulatory alignment.

Local Presence with Global Perspective

A strong UAE presence supported by a global network, delivering solutions that are both locally compliant and internationally scalable.

Our Service Offerings

Andersen provides comprehensive advisory and implementation support throughout the entire e-invoicing lifecycle. Each phase of our service is designed to address both compliance requirements and operational efficiency.

Impact and Readiness Assessments

Evaluation of existing systems, data structures, and business processes to determine organizational readiness for e-invoicing. This includes identifying compliance gaps and areas for process optimization.

Awareness and Stakeholder Engagement

Delivery of tailored awareness sessions to inform internal stakeholders about regulatory requirements and the operational implications of e-invoicing adoption.

Change Management and Training

Support for process redesign, updates to standard operating procedures, and development of training programs to facilitate smooth organizational adoption.

System Integration & Advisory Services

Advisory on ERP system integration, middleware configuration, and IT architecture to enable seamless connectivity with government platforms and service providers.

Vendor Evaluation and Selection

Assistance in identifying and selecting suitable e-invoicing technology vendors based on compliance, scalability, and system compatibility.

Proof-of-Concept (PoC) deployment

Design and execution of a limited-scope implementation to validate system readiness, test integration with government platforms, and demonstrate compliance before full-scale rollout.

End-to-End Implementation

End-to-end implementation in a Peppol compliant platform offering real-time validation, secure exchange, and full compliance with UAE and international e-invoicing standards.
